## Viveve Consent

*In considering a treatment, please read the following information carefully and discuss any questions you may have with your physician.*

**IT HAS BEEN EXPLAINED TO ME THAT:**

- The Viveve<sup>®</sup> System delivers a low amount of radiofrequency energy to the tissue inside the vagina near the opening. While there is no downtime, the tissue may be tender from the treatment. Therefore, I understand it is important to follow my doctor's timeline for refraining from intercourse or insertion of tampons.
- The results vary from person to person given the amount of tissue laxity and my body's own natural response to the treatment.
- I may not start to feel a difference until approximately one month after treatment and that the results may build gradually in the months following.
- This non-surgical treatment is not intended to provide the same results as a surgical procedure.
- The known side effects of the Geneveve treatment are rare and transient and may include: temporary swelling, pelvic discomfort, or redness in the treated area; mild, intermittent, discomfort during the procedure related to warmth/heat and/or cold; temporary vaginal discharge; temporary tingling in the treated region; brief allergic reaction or hypersensitivity.

**MANY FACTORS CONTRIBUTE TO SEXUAL SATISFACTION:**

- I understand that increased friction resulting from tightening of the vaginal opening is one of many factors contributing to sexual satisfaction.

I have read and understand all the information presented to me. I consent to the Geneveve by Viveve treatment.
